# COMMUNITY LEARNING RESOURCES

Some communities are more learning-friendly than others. Community Learning Resources (CLR) is a community-based urban mapping website and application suite that reveals your local learning geography and shows how it scores on a range of learning habitat indicators. CLR resource maps are hosted by local civic agencies but receive inputs from community organizations and individuals. Together, these contributors help make visible various learning assets and risk factors, such as: the locations of community fabrication hubs (do-it-yourself production centers), neighborhood youth innovation teams, and work-to-learn apprenticeship opportunities; the number and location of wifi access points, farmer's markets, "neighbor goods" sharing networks, and green spaces; and neighborhood ratings of safety, air pollution, water quality, and walkability.

By making the learning geography visible and measurable across a wide set of parameters, CLR's maps empower you to navigate your learning landscape more adeptly and to advocate for improvements. Use CLR to request that a "groundcrew" focus its next clean-up or improvement campaign in your neighborhood. Find the nearest learn and play space for your seven-year-old. Organize a birthday party at the community fabbing hub. Find out what schools have the most vibrant community service programs or apprenticeship opportunities.

In addition to accessing all of this functionality online, you can use the CLR Mobile Mapper app to become a community learning ecosystem mapper. Use your mobile device's GPS function to post learning resources to your community's learning resource map and watch your learning community grow.
